DentalEZ Group announces a new addition to its StarDental line of products, the NuTorque programmable electric handpiece system.

The NuTorque system provides maximum flexibility for a variety of individual solutions. Dental professionals will experience maximum control with minimum effort using NuTorque’s unique easy-to-use touch screen display. This customizable display includes 3 general procedure memory presets for common practices such as cavity preparation, caries removal, and polishing, as well as 5 endo memory presets. With a simple touch, the endodontic setting can be programmed according to the endodontic file manufacturer’s instructions.

With the NuTorque system, dental professionals are provided the freedom to perform various individual procedures while delivering consistent speed and powerful torque on both high- and low-speed settings. The 50 dBA whisper-quiet, vibration-free motor system is also easily adaptable to existing standard delivery units.

Equipped with a brushless motor, NuTorque is compact and lighter than existing electric motors on the market. Measuring 4” and weighing less than 99 g, the balanced, lightweight micro-motor coupled with the ceramic-bearing titanium attachments enables the dental professional to easily maneuver throughout the oral region.

The NuTorque system is the latest offering from DentalEZ Group’s brand of StarDental products, which includes a complete line of high-speed, low-speed, and hygiene handpieces.
# CATEGORY SPOTLIGHT

## HANDPIECES

The Synea TA-97LED from A-Dec/W&H is an extremely light handpiece with daylight bright LED lighting. It uses a Penta Spray system with 17 W of power, with a very small 10 mm diameter head. The Alegra WE-99LED-G, a new lineup of attachments with an on-board generator to power a bright LED light, has a triple port spray handpiece that works with the new A-dec EA-30 electric motor.

### AHP-72MBFO
Aspetico’s 1:5 increaser E-type contra angle with fiber optics is internally irrigated to cool the head of the handpiece and irrigate the cutting site. The handpiece achieves 200,000 rpm with a 40,000 rpm motor. This universal high-speed handpiece is ideal for removing caries, cutting crowns, or for any other high-speed applications. The AHP-72MBFO accepts friction grip burs.

### AHP-88MN
Aspetico’s 8:1 reduction endodontic E-type handpiece has a swing latch mini head that allows greater visibility during procedures. The handpiece also has a sleek body design. The instrument’s speed ranges from 40 rpm to 3600 rpm depending on the endodontic motor.

### AHP-88MNP
The 8:1 reduction endodontic E-type handpiece from Aspetico has a push-button micro head. This micro head allows for greater visibility, and the push button allows for easy insertion or removal of the file. In addition, the handpiece has a sleek body design and a speed range from 40 rpm to 3600 rpm depending on the endodontic motor.

**UPCOMING NEXT MONTH IMPLANTS AND BONE REGENERATION**

**DID YOU KNOW?**
Optimal handpiece cutting efficiency requires good coolant access, especially in restricted areas. A multipor handpiece, which provides better water spray pattern, may be best when preparing the interproximal region for a crown or a proximal box. Dentists should consider the influence of the number of spray ports when selecting handpieces for cutting procedures.

MONT BLANC HANDPIECES
The new Mont Blanc handpieces (models AHP-85MB and AHP-85MB-C) from Aseptico are stainless steel with precision ball-bearing construction for efficient output. Model AHP-85MB-C includes an adjustable auto-stop kit (2 stops—short and long)—and a graduated ruler. The stops allow for precise depth control and also give added safety when drilling near dental risk areas.

BIEN-AIR CA1541
CA1541, Bien Air’s version of a 1:5 increaser, has a handle that is machined from a solid brass block to minimize vibration. Advanced technology creates the Anti-Heat push button mechanism, which means it can be used for both high-speed and low-speed uses on any Bien Air motor system. The CA1541 also features dual glass-rod cellular optics.

ENDOSEQUENCE II
Work smarter and safer with freedom of movement when using the EndoSequence II cordless handpiece from Brasseler USA/NSK. The large LCD, simple 5-key operation, and lightweight cordless handpiece assures easy use even during the most delicate endodontic procedures. The automatic reverse and alarm function alerts when the preset torque level is almost reached. The unit has 5 programs for different file systems.

NL400
The NL400 from Brasseler USA/NSK uses titanium so that the NL400 and high-speed attachment together weigh only 137 g. The NL400’s lightweight, brushless motor virtually eliminates maintenance and repair, while delivering a strong 3.0 Ncm of high-torque power. In combination with a wide range of attachments, the system can operate from 2 rpm to 200,000 rpm.

NL6000
The new Brasseler USA/NSK NL6000 optic high-speed handpiece offers high-torque in a lightweight design. The fixed-back air NL6000 handpiece connects directly to traditional 5-tubing and features fiber optics. It has an ergonomic neck design and push button chuck for easy bur removal. The autoclavable NL6000 handpiece operates between 400,000 rpm and 450,000 rpm.

NL9000
The Brasseler USA/NSK NL9000 combines power, precision, and comfort. The use of a twin nozzle drive system produces efficient and powerful torque, while an internal regulating valve ensures that the air pressure is controlled. The Ti-Max solid titanium body gives the handpiece a stylish, yet durable, design, providing an ergonomic grip that responds to the user’s movements. The turbine has been designed to maximize power and minimize noise.

PANA-MAX PLUS
The Pana-Max PLUS series of high-speed handpieces from Brasseler USA/NSK are precision-engineered to offer power and reliability. The new Pana-Max turbine cartridge provides smooth delivery, while the bur retention system securely retains the bur under increased torque loads. The stainless-steel body is comfortable in the hand and angulated for direct visibility of the operating site.

**TI-MAX X**
Brasseler USA/NSK designed and engineered the new Ti-Max X to be easier and faster. Newly developed Dual Air Jet generates 22 W power. Bright cellular optics provide uninterrupted visibility to every part of the treatment field. Quattro Water Spray provides optimum cooling effect with mist-like fine water droplets. The lightweight, curved Arc-line solid titanium body lets the user keep an ideal head and grip angle even when working in hard-to-access areas.

**SOLARA**
DentalEZ Group and StarDental’s Solara High-Speed Handpiece Series is available in 8 styles. The small head size facilitates access and maneuverability, and the bifurcated cellular glass-rod fiber optics increase light output. The lightweight titanium Solara weighs 32 g, reducing hand and wrist fatigue. All handpieces are equipped with StarDental’s exclusive Ceramic Bearing Turbines.

**TITAN E-LECTRIC**
The Titan E-Lectric handpiece from DentalEZ Group is designed for low vibration and reduced noise. The cellular glass rod optics provide high light intensity, and the lightweight control unit has a small footprint. The speed of the Titan E-Lectric ranges from 100 rpm to 200,000 rpm. The unit can be easily retrofitted to existing delivery systems or it can be fully integrated.

**TI-MAX X**
Brasseler USA/NSK designed and engineered the new Ti-Max X to be easier and faster. Newly developed Dual Air Jet generates 22 W power. Bright cellular optics provide uninterrupted visibility to every part of the treatment field. Quattro Water Spray provides optimum cooling effect with mist-like fine water droplets. The lightweight, curved Arc-line solid titanium body lets the user keep an ideal head and grip angle even when working in hard-to-access areas.

**SOLARA**
DentalEZ Group and StarDental’s Solara High-Speed Handpiece Series is available in 8 styles. The small head size facilitates access and maneuverability, and the bifurcated cellular glass-rod fiber optics increase light output. The lightweight titanium Solara weighs 32 g, reducing hand and wrist fatigue. All handpieces are equipped with StarDental’s exclusive Ceramic Bearing Turbines.

**TITAN E-LECTRIC**
The Titan E-Lectric handpiece from DentalEZ Group is designed for low vibration and reduced noise. The cellular glass rod optics provide high light intensity, and the lightweight control unit has a small footprint. The speed of the Titan E-Lectric ranges from 100 rpm to 200,000 rpm. The unit can be easily retrofitted to existing delivery systems or it can be fully integrated.

**MIDWEST STYLUS**
The Midwest Stylus, from DENTSPLY Professional, offers dentists best-in-class performance, power, durability, and ergonomics. The Stylus delivers the power of a big head in a mid-sized head offering a strong, smooth, controlled cut without compromising introral access. The ergonomic design, the new dimple grip, stainless steel construction, and 360° swivel with quick-disconnect enables a secure grip with minimal hand fatigue.

**C-TYPE**
Henry Schein’s high speed C-type handpieces offer optimum power with quiet operation, delivering 400,000 rpm’s at 32 psi. The lightweight handpieces are available in standard or push button, for quick and easy bur change. Both types feature a fixed 4-hole connection and are fully autoclavable.

**MIDWEST STYLUS ATC**
Midwest, by DENTSPLY Professional, designed the only air-powered adaptive control handpiece to provide the most powerful cutting ability. Adaptive Torque Control (ATC) intelligence senses the need for more torque and delivers additional power while cutting. The power of air driven handpieces accelerates to a peak power when speed decreases, whereas Stylus ATC provides high power on immediate contact with the tooth and maintains that power level at a constant speed throughout the procedure.

<tbody>
<tr>
<td><strong>Rotary Master</strong></td>
<td>The Rotary Master is a lightweight, ergonomically designed, low-speed electric motor from J. Morita with consistent operating speed, regardless of the load applied to the rotary file. Rotary Master comes with 16:1 contra angle and very small contra head. Variable speed allows the unit to be used for a wide variety of both general and endodontic procedures. Other features include a large digital rpm display and touch-panel adjustments, including motor reverse.</td>
<td></td>
</tr>
<tr>
<td><strong>TwinPower Turbine</strong></td>
<td>TwinPower Turbine from J. Morita features extremely powerful double-impeller technology that delivers constant torque, even under high-load conditions. For superior infection control, TwinPower is a handpiece equipped with a pressurized air system that prevents intake of contaminated aerosol and other particles into the air line. A new mini-head design is available that offers cutting efficiency equal to or greater than other standard-sized heads.</td>
<td></td>
</tr>
<tr>
<td><strong>Challenger</strong></td>
<td>The Challenger High Speed Handpiece Series is the most popular Johnson-Promident handpiece line because it eliminates the need to choose between quality and price. Challenger handpieces offer factory-balanced turbines for excellent concentricity at 400,000 rpm. In-office replacement cartridge capability reduces cost and downtime. Numerous configurations are available, including a model offering high-quality, brilliant fiber optics.</td>
<td></td>
</tr>
<tr>
<td><strong>Gemini Handpiece Series</strong></td>
<td>Johnson-Promident recently launched its latest innovation, the Gemini Handpiece Series, which allows users to select the same design and performance features of their favorite brands at a lower cost. The initial items introduced are fiber-optic handpieces that are interchangeable with the KaVo Super Torque and the KaVo Bella Torque. Both offer perfect compatibility and the same performance and user experience as the original brands.</td>
<td></td>
</tr>
<tr>
<td><strong>Whispair Handpiece Series</strong></td>
<td>The Whispair Handpiece Series from Johnson-Promident offers precision high performance. The handpieces have universal compatibility with KaVo, Midwest, Star, NSK, and Bien-Air swivels. They offer whisper-quiet operation and 3-port water delivery. These handpieces compete with the industry leaders at a fraction of the cost.</td>
<td></td>
</tr>
<tr>
<td><strong>CompactTorque 636CP</strong></td>
<td>COMPACTTorque 636CP, part of the KaVo Classic Collection of handpieces, is an air driven, nonoptic, high-speed handpiece. It comes with a standard head and 1-port water spray. The precision-balanced turbine delivers high torque. KaVo offers a 1-year warranty with the COMPACTTorque.</td>
<td></td>
</tr>
<tr>
<td><strong>Gentlemini LUX 4500B</strong></td>
<td>The Gentlemini LUX 4500B is designed for patients with difficulty opening their mouths wide for full oral access. It features a miniature head with a 100° head angle, a diameter of only 10.8 mm, and a height of 12.1 mm for optimum visualization while maintaining high torque and outstanding cutting efficiency.</td>
<td></td>
</tr>
</tbody>
</table>
GENTLESILENCE LUX 6500B

The quiet GENTLESilence from KaVo reduces high-frequency peaks and operates at a low frequency range and decibel level to protect operator's hearing. It has the highest torque available in an air-driven high-speed handpiece, resulting in fast, precise crown and bridge preparations. The GENTLESilence LUX 6500B offers unsurpassed molar region access using a standard 19-mm bur with unprecedented visibility and accessibility.
